Assignment2_Oct4

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
library(lpSolveAPI)
Weigelt_linear.lp <- make.lp(11,9)</pre>
# obj function - min
#set.objfn(silver.lp, c(40, 40, 30, 30, .8, .8, .6, .6))
set.objfn(Weigelt_linear.lp, c(420,360,300,420,360,300,420,360,300))
lp.control(Weigelt_linear.lp,sense='max')

```

Alternative method

You can also embed plots, for example:

```
#Alternative method
Weigelt.lp.alt <- read.lp("Weigelt.lp")</pre>
Weigelt.lp.alt
## Model name:
     a linear program with 9 decision variables and 11 constraints
solve(Weigelt.lp.alt)
## [1] 0
get.variables(Weigelt.lp.alt)
## [1] 484.6154 220.5128
                           0.0000
                                     0.0000 666.6667 166.6667
                                                                0.0000
                                                                          0.0000
## [9] 416.6667
get.objective(Weigelt.lp.alt)
## [1] 697923.1
get.constraints(Weigelt.lp.alt)
   [1] 13000.0000 12000.0000 5000.0000
                                            705.1282
                                                                  416.6667
                                                       833.3333
   [7]
          484.6154
                     887.1795
                                583.3333
                                              0.0000
                                                         0.0000
```

Note that the echo = FALSE parameter was added to the code chunk to prevent printing of the R code that generated the plot.
